FINAL COOLING BOOST

SACMI for enhanced process control and quality

Final cooling blowing circuit boosted to reduce the temperature of tiles exiting the kiln.

Process consistency

ADVANTAGES

- Outgoing tile temperature reduced by up to 25 °C

Kiln improvements

FINAL COOLING BOOST

Technical features

The final cooling blow circuit is boosted by replacing existing blower pipes with dual-feed pipes and installing new lower and upper manifolds; flow rates of intake and blowing fans are checked to see if flow is sufficient or whether the fans need replacing.
