MOTORIZED GUIDES

SACMI for efficiency

Motorized adjustment system for PCR infeed guides.

Reduced Downtime

VANTAGENS

- Guide adjustment via remote control, manual adjustment no longer required
- Guide positions shown on the monitor
- Adjustments can now be made without stopping the line

MOTORIZED GUIDES

Technical features

Thanks to the new motorized adjustment system, regulating the angle of the guides at the PCR infeed is now much simpler. The PCR interface has a dedicated page illustrating the positions of the actuators and their operation. This system ensures perfect powder loading and slab edge density at all times.
