Tile production line improvements

DCL - DRY

SACMI for optimized productivity

Specifically engineered for the feeding of dry milling powders, the DCL – Dry feeder is also equipped with a newly designed moveable hopper.

Enhanced output

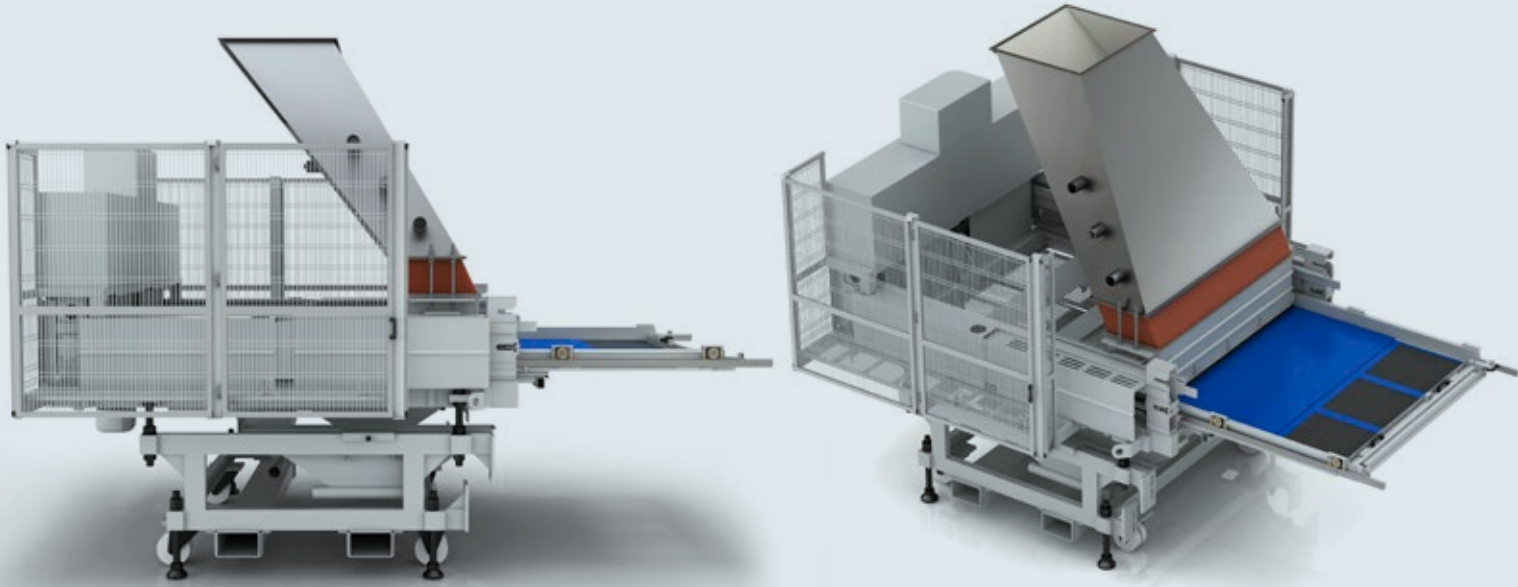

YOUR ADVANTAGES

- Reduction of cleaning time
- Quick and easy floating grid replacement
- Increase of press working speed thanks to a more precise product feeding
- Sets of hoppers purposely designed to recover product spills
- "P. BACK" installation ready

Tile production line improvements

DCL - DRY

Technical features

In addition to the typical characteristics of the standard DCL feeder, such as transmission robustness and quality of materials, the DCL - Dry is equipped with:

- a new designed feeding hopper, complete with an inclination-adjustable discharge outlet;
- low consumption electrical vibrators;
- frontal grid replacement system;
- improved sealing between feeder body and sliding plate.
