SACMI for optimized productivity

New generation hydraulic unit with improved cooling and filtering systems.

Enhanced output

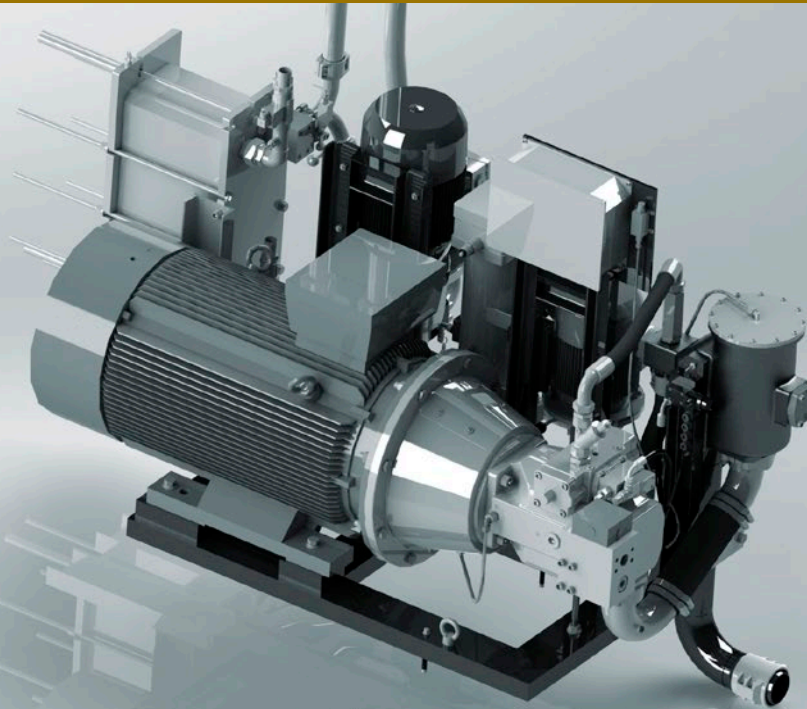

YOUR ADVANTAGES

- Increased production speed
- Better dissipation of heat
- Oil filtering optimization

Technical features

The new hydraulic power unit is suitable for all those customers who want to increase the production speed of their press or simply replace the standard unit with a more performing and efficient one. In addition to a new and more powerful motor, the unit is equipped with a flushing pump with a 6-micron filtering cartridge and an independent pump for the cooling system.

A 4.0 version is also available with complete diagnostic for monitoring the wear status of the pump, which in combination with the "OIL CARE" package, allows a complete predictive control of the machine.
