SPE PLANA

SACMI for optimized productivity

Increase the productivity of your press up to 60% with SACMI SPE Plana.
It can be installed on the following new or existing models of SACMI presses:
PH6200, PH6500, PH7500, PH8200, PH10000.

Enhanced output

ADVANTAGES

- Increased extraction force (up to 30 tonnes)
- Full control of mould flatness
- Increases output at the same press tonnage, with an increase in productivity of up to 1 MLN square metres per year. For example:
 1. from 7 to 11 outputs on 15x90 cm formats
 2. from 5 to 8 outputs on 15x120 cm formats

SPE PLANA

Technical features

The SPE Plana extractor features 4 independent pistons mechanically linked to the moving part of the mould.

Each piston is an independent mechatronic object, resulting in:

- a high degree of **accuracy and repeatability** during positioning;
- perfect **synchronisation** of movements.

As a result of the total control of **mould flatness** and the increased **extraction force** (up to 30 tonnes), a significant improvement in quality and productivity is achieved in both **medium/large formats**.

The maximum increase that can be achieved is in **large listels**, 15x90cm and similar sizes (considering a PH8200 press, with SPE Plana it is possible to **increase outputs** from 7 to 11, +57%, equal to **1 million sq.m. more** product per year).
